I currently have PGP Personal Desktop 8.1 installed on a Windows XP machine. I have a new machine with Windows 7 (64-bit) & I want to know what my options are. I don't have any experience with encryption and I would like to use these keys as little as possible. I would like to see PGP completely and completely removed. Any hints would be appreciated! Thanks Paul It might be a little hard to tell without seeing your home machine. But I can say that you can't just delete the key. But I assume that you would like to keep only your license. You can find it here: [http://www.pgp.org/license\\_licensing\\_overview\\_en.html](http://www.pgp.org/license_licensing_overview_en.html) fffad4f19a
