krunner. Haha strive: yep, krunner is what you are looking for I believe strive: my bad, I thought you wanted the kde 4.x appearance settings. dzup: I would prefer krunner, but was trying to avoid using the desktop. :) strive: try this strive: dzup: Thanks. I think I'm going to read the wiki. strive: make sure to read the last paragraph strive: it is important not to confuse /var/run/policykit-1/authsocket.socket and /run/kservice/kservice.socket dzup:

---

I'm reading the wiki, just didn't get the restart part of it. strive: the way to run the script is to execute: bash /home/me/./krunner (change /home/me/ to what you want) dzup: I'll try it. Thanks.

animalese.js Demo. More information and source code at Testing out animalese.js. Does it work? Shortening words in URLs or filenames and folders can lead to problems if the abbreviations do not make sense. To see if anything needs to be changed, use a spell checker. Try typing the following command into the address bar: `http://www.example.com/about?s=testing` If the address doesn't make sense, don't try to change it. URL word
