It provides a number of handy terminal commands that are typically not available on Linux. Many of these commands were historically available in a man page in older versions of the GNU C/C++ compiler. In addition to the ability to view standard linux information about your computer and network, the utility allows users to launch various Linux shells from the command line. Many terminal commands do not even require entering text, and simply press ENTER or the up arrow to run a specific command. More advanced users can always use the alternate console and "run" standard input, output and error output (rather than the default, which allows only I/O to take place). In addition to the usual text and graphics applications, Linux Terminal Lite also provides a number of useful terminal applications, such as the ability to manage the file system and run a web browser. Linux Terminal Lite supports the Console color scheme and high resolution color schemes, and users can change the appearance of the console by right-clicking on the console to allow them to define the background and font colors. Examples of standard Linux commands that are available through this utility are ls (list directory contents), pwd (print working directory), cd (change working directory), and mail (send mail).
