Maintaining high rates of cryopreservation and implantation of human blastocysts has been a long-standing challenge in assisted reproduction. The influence of donor oocyte factors on the outcome of cryopreservation and implantation of human blastocysts is not fully understood. The aim of the present study was to investigate the impact of a poor-quality blastocyst on its cryopreservation and implantation in relation to donor oocyte factors. A total of 852 blastocysts from 162 cycles were cryopreserved. A receiver operating characteristic (ROC) curve was generated to identify blastocysts with the poorest postthaw recovery. Based on the area under the ROC curve (AUC), 0.5 was considered the optimum cut-off point for predicting the blastocyst with the poorest recovery. A cut-off value of 0.21 was then used to define blastocysts with impaired quality. Implantation rates were compared between cryopreserved blastocysts with 0.21 or better and those with 0.21 or worse. Patients were divided into three groups according to the quality of the blastocysts. To identify potential donor oocyte factors associated with the outcome of blastocyst cryopreservation, the 5b5f913d15

What's New In AutoCAD?

Improvements to the new AutoCAD user interface: Improvements in UI polish, including colors, navigation, and layout. New customization features to allow you to personalize your AutoCAD experience. What's new in AutoCAD 2023 beta Markup and Annotations: Markup Tools: Now you can easily mark up drawings using either a pen or a standard drawing tool. You can add annotations to parts of a drawing, and you can also add notes to parts of the annotation. There are three methods to add a markup in a drawing: Placing an active annotation on a part of the drawing Adding a static text box annotation to a drawing Adding a line box annotation to a drawing You can change the location of the annotative objects, modify their appearance and remove them from the drawing. Markups can be linked, so you can perform various actions on linked objects, such as start and end a drawing or transfer the annotation to other parts of the drawing. Active annotations can be anchored to a specific point in the drawing, where they will remain when you open the drawing. The drawing will show the marker at the current position of the anchor. Active annotations can be set to be always visible, or only when you are in the drawing view or only when you are the current user. Placing a static text annotation to a part of the drawing Static text annotations are active, but they don't automatically update the location of the annotation when you open the drawing. You can place them at a fixed location in the drawing, and they will remain there until you remove them. You can also set them to only be visible when you are the current user. Line boxes You can also mark up parts of a drawing using a line box annotation. Line box annotations behave like an active text box, but they don't require any specific drawing point to exist in the drawing. When you place a line box annotation, the line box appears and can be edited to change the length and position of the annotation line. You can place the line box annotation at any position in the drawing, regardless of any predefined drawing point, and you can also delete the annotation line from the drawing. You can also change the color of the line box annotation. Note: Line boxes will not be visible if you switch to wireframe mode
