Latina women have unique needs, and we explored the experiences and challenges of family physicians caring for Latinas in usual care. A sub-sample of 5,674 primary care visits made by 290 women of whom 31.5% were Latina, was analyzed using the Methodology for the Study of Health Care in the Margins and the Salient Experience to Indicate Rigor in Health Outcomes. Themes identified include the importance of family cohesion, trust, and cultural competence; a lack of acculturation support from physician and nurse; and the paucity of Latina health care providers.
