Resolution of the molecular bases of metachromatic leukodystrophy in cultured skin fibroblasts by genetic complementation and linkage studies. Using fibroblast lines from three patients with metachromatic leukodystrophy (MLD), two types of complementation studies on enzymatic activities were performed. Kinetic analyses on hexosaminidase activity and electron microscopic (EM) studies on myelin particles were indicative of a partial enzymatic defect. However, when levels of mRNA of six enzymes related to heparin sulphate, nonsulphated glycolipids, and sulfatides were compared in fibroblasts from patients and controls, no differences were found. Linkage analysis with enzymes polymorphic for the spinocerebellar degeneration-1 (SCD-1) locus, the locus which has been associated with MLD, showed that three spinocerebellar families were doubly homozygous at this locus. Addition of human MLD fibroblasts to embryonic neural tubes revealed a non-suppressed expression of these three enzymes. Subsequent analyses on the spinocerebellar family, which was found to be doubly homozygous, confirmed the linkage of these genes to the SCD-1 locus. Since it is known that SCD-1 is not transcribed in fibroblasts, these findings strongly suggest that these individuals are homozygous at both the SCD-1 and a yet unknown, second defective locus. Q: How to determine the output resistance of an OpAmp? I'm currently trying to determine the output resistance (R_{out}) of an OpAmp (following: How to determine the open-loop gain of a differential amplifier?). However, I'm unable to determine the R_{out} . I've implemented the following circuit: simulate this circuit – Schematic created using CircuitLab Assuming that the input differential signal V_+ and V_- is the input voltage, that is V_{in} , and that $V_{in} > 0$, the opAmp's non-inverting input is V_{in} , and that OpAmp's inverting input is 0, we have: $V_+ = V_{in}$ $V_- = V_{in}$ $V_{out} = V_+ * (1 + V_{out})$ $V_{out} = V_{in} * V_{out} / (1 + V_{out})$ R

There are several ways to use this tool. Click on an area in your image to select it. Then, hold down the Alt key and click on an area in the background. Several shortcut keys are available for quick access to the basic tools. The “c” key is used to undo an action, “u” to erase it, and “x” to exit to the main document window. The tools are: “P” to make selections “S” to zoom in and out “U” to undo “I” to invert the selection “B” to blur the image “D” to desaturate the image “X” to exit the brush tool “C” to clone the image “V” to paste it somewhere “T” to transition it “Y” to apply a blur “F” to fill the selection “K” to make a selection from any color “G” to make a selection from a light area to a dark area “J” to make a selection from a dark area to a light area “L” to make a selection from a dark to a light area “G” to make a selection from any gray to any other gray “Z” to make a selection from any black to any other black “S” to make a selection from any white to any other white “V” to make a selection from any transparent to any other transparent “K” to make a selection from any opacity to any other opacity “U” to make a selection from any brightness to any other brightness “B” to make a selection from any darkness to any other darkness “X” to make a selection from any transparent to any other transparent Each brush has a unique shape and behaves differently. For example, the Normal brush has a standard shape, but the Round brush has a round shape. Click on the brush to access the settings. You can set the following parameters, including brush size, opacity, size of the background image to which it will be applied, and angle of the brush. Choose a brush by clicking on it in the brush list. Make it smaller by dragging the slider bar along the left
