Photoshop is a complex program that can take a long time to learn. Good tutorials with clear graphics will help novice and intermediate users

---

take their Photoshop skills to the next level. The market is flooded with free online tutorials, but they aren't always the best. A good video tutorial will take you through real-world projects, explaining each step in practical terms, and these tutorials can be almost as good as seeing the editing done in-person. Finding Photoshop Tutorials The Adobe

---

Exchange site is an excellent source of online tutorials. It's a free community of Photoshop users who offer their assistance to one another. It's packed with tutorials, including those from the Adobe Photoshop, Adobe Photoshop Elements, and Illustrator users. You can search for Photoshop tutorials within the site's extensive library or by

Q: Retain Rotation of 2D object during rotation in 3D SceneKit I would like to have a 2D object I've added to a 3D scene retain its rotation. I already have it being rotated fine (It's a point, but here is a picture): but as the orientation of the camera changes, it doesn't stay in the same

---

place anymore. The point rotates as well. This is expected behavior, but i'm curious if there is a way to prevent the rotation from occurring.

```
node.addChildNode(test2.node) test2.position = SCN Vector3(x:(self.scene!.camera.transform.columns.3[0]), y:(self.scene!.camera.transform.columns.3[1]), z:(self.scene!.camera.transform.columns.3[2]));
```

```
test2.rotation = SCNVector4(x:(self.scene!.camera.transform.columns.4[0]), y:(self.scene!.camera.transform.columns.4[1]), z:(self.scene!.camera.transform.columns.4[2]), w:(self.scene!.camera.transform.columns.4[3]));
