Want to know how to do something in Photoshop? You can try the process and see whether it works the way you think it should. Even though Photoshop is a complicated program, with thousands of different features and functions, it doesn't take long to learn. Photoshop lets you play with features and see whether they work the way you want them to. Sometimes you need to have things explained in simple steps, but the best way to learn how to use a feature is to actually use it. Photoshop's goal is to enable you to create realistic images using many different methods. You can create a realistic image using a photo as a source, create a photo using layers, or use the methods of a photo editing class. The workspace Figure 4-1 shows the Photoshop interface with the workspace window open. You can switch between the various windows using the Window menu at the top of the screen.

This interface can be used in many different ways, from creating and editing images to organizing layers to working with a timeline in video editing. The workspace can be split into two panes or can remain in one large window. The workspace window shows you the contents of the document window. The workspace includes basic Photoshop tools such as the Photoshop swatch palettes and the Photoshop toolbox on the left side and palettes on the right, as well as a few panels that show the current workspaces. **Figure 4-1:** The Photoshop interface includes several windows. To keep the workspace clean and tidy, you can add a feature called a toolbox to the left side of the workspace window. This toolbox holds panels related to the current task. It can include sets of window and panel configurations as well as panels for organizing layers. The tabs at the bottom of the toolbox window provide easy access to any of the toolbox features. You can also add the Photoshop panel to the right side of the workspace window by clicking the small downward-pointing triangle icon near the bottom of the Workspace window. This panel includes options to lock the workspace, open the Photoshop history, and show the Photoshop panel. (For more on the Photoshop panel, see the next section.) Working in Photoshop can be challenging for those who are not used to working with digital graphics. Good Photoshop practice includes saving often, saving a version of your

This trend has had at least one Reddit user thinking of a fascinating addition to their K-9 camping kit, the snout of an actual dog. The dog, a Husky named DuShit, writes in the dog's Instagram story that his owner got two separate, handmade camping chairs for dogs. "[They] are both lined with fleece and have a GPS tracker inside," the dog wrote. "Now I get to have 24 hour access to you at all times. There will be no cheating." "I even get to bring one of my brothers." The dog offers to let them both sleep on his bed, but will also allow them to stay with him. "If it's cold out I'll let you stay in the iceman until you stop shivering and make sure you are warmed up," the dog says, adding that he will also allow them to chew on any dirty socks and underwear in the laundry.
