becoming more mature from childhood means there is less allowance for mistakes, less resistance to change, and less tolerance for delaying decisions. it is often necessary in the early years to provide extra help to a developing child in order to bring him/her along in a healthy way. in many ways it is important to encourage the child to move forward rather than to stand still. there are two main areas of concern, the need to work on attitude and the need to work on values. attitude includes a willingness to do as you are asked to do, a willingness to accept instructions, a willingness to learn from others, and a willingness to be nice to others. you may have to work on both with children, and you are right to do so. they do not like to be told what to do, and they especially do not like to be told what to do, and most definitely do not like to be scolded. they need to learn to accept responsibility and to understand that there are consequences to their actions. you need to be firm with them, but firm in a caring way. an example would be that the baby needs to learn to eat when told, and when told. she is told to feed from a spoon, and she gets the spoon. there are consequences to that action, and she learns that when she gets in the way she is being told to eat and in the way she is being told to stop. she learns that if she gets in the way she cant eat. this unit provides students the opportunity to use what they know about their memory and their imagination to create a collage using memory visions. the memory visions design program is an effective non-verbal, brain based memory training program that can be used with students at many levels of cognitive functioning.

in 1914 the (old) new york mets broke camp and started a baseball season with the grand goal of being the first team in professional baseball to win the pennant and the world series. the onetime "american league champions" boasted a record of 98-39. with shortstop john "red" schoendienst leading the way, the mets took the first of what would turn out to be 104 consecutive series. but schoendienst, a human magnet for controversy, was seen as a distraction and he was traded to the boston braves just two weeks into the 1915 campaign. no one seemed able to crack the code of the "met men", as the club was soon dubbed by the press. first baseman (and fellow yankee) hank bauer was in his eighth season with the team when the mets took the field in 1915, and he was asked to lay down the law for the ragtag bunch of misfits known as the defending world series champion new york mets. i have a feeling that he must have hated his part in this setting, but he somehow managed to adapt to the task. the mets went on to win three more pennants in the next seven seasons, but came up one game short of winning the world series in 1920, when the giants broke its hearts in the deciding game of the fall classic. from 1915 to 1921, the mets were a potent threat to the giants' success on a regular basis. but they were always lost, again, at the end. and so ends my story about the new york mets. geographic information systems (gis) have become a vital tool for many businesses and applications in the 21st century. using a database, gis can access and utilize numerous sources of large-scale information, such as maps, shapes, points, lines, and

attributes. as anyone who has used a gis knows, it provides great benefits to the user. gis data can be very easily collected, analyzed, and manipulated in a creative way. today, gis is used for a number of activities including geotechnical investigations, recreational planning, and public policy analysis, among others. it is highly important for every company or business to understand the basics of gis in order to stay competitive in today's business environment. let's take a look at how. 5ec8ef588b
