the world wide web has also become a major source of software development. for example, the software used for this section of the website (ibm.com) is not programmed by ibm. instead, the software is written by third party developers using open source software (see below) to create a streamlined environment. one of the most common types of freelance jobs is software development consulting. software developers who have learned programming skills through formal education or as part of an internship can use those skills to find work as consultants. software developers can also be employed as software designers, sometimes called software engineers. some software developers focus on a specific area of software development such as systems analysis, while others work on tools and infrastructure software. software quality assurance analysts and software testers are involved in quality assurance and testing, which involves reviewing the software before it is released to the public. they may be required to look for possible errors and determine whether the code meets requirements. the quality assurance analyst may also be responsible for testing software to ensure that the program runs as expected. the quality assurance analyst or tester may test the program to make sure the program behaves as intended. software quality assurance analysts and software testers work for manufacturers of software. they work on programs that they have not created. they may be involved in testing the quality of the program or testing the quality of the final product. they also ensure that the program will work properly on the systems or devices it is being tested on. 5ec8ef588b
